- Security training incl. but not limited to counter IED, First Responder, specialized medical training
- Concept of Operations, CONOPS
- Standard Operating Procedures, SOPs
- Planning and organisation of multi-agency Disaster Drills
- Handover planning and procedures
- Quality assurance and quality control

IMPROVED NATIONAL SECURITY BENEFITS EVERYONE

Providing security for a nation and its residents is one of the main purposes of having border controls. Securing borders is a complex task that involves many different government agencies and professional skill-sets. The proper management of borders, which is vitally important for national security, presents many challenges. These are likely to increase not just due to new threats evolving but also since the amount of legitimate trade and travellers is constantly growing. It is increasingly apparent that a nation not only needs to control the borders but manage them wisely.

Today, threats come from non-state actors, in the form of religious radicalism and extremism, terrorism, illegal drug trafficking, irregular migration, smuggling, and the like that are increasingly organized in a cross-border fashion.

Border Management is the means to promoting secured border which still allowing the movement of people and goods. Effective border security is the efficient management of border processes.

National and Border Security

A customized border management solution built on a modular concept will flexibly build security, redundancy and different protection measures into the daily operational work.

CORE COMPONENTS

Prevention – proactively reducing potential risk through safety measures, technology, training, SOPs, etc

Detection – locating and recognizing the presence of potential threats and hazards through technology, risk management and human interaction

Action – addressing detected risks and hazards with solid processes.

STANDARDS

Security should meet recognized guidelines and standards.

SOLUTIONS

Our service is focused on your business, we work with independent partners to complement our skills and we tailor our expertise to meet your needs.

PROCESSES

Security is closely linked to other processes such as Risk Management, IT and Controls.
